

# Vertical Adventure

Android - ios

## Description

Vertical adventure is an arcade game fully designed for mobile gaming. The game is designed to be played with one finger, whilst giving a lot of freedom in the controls. The goal is to collect all targets and avoid the enemies by tapping on the screen.

The player can clear all the levels and beat each reference time before replaying all of them in speedrun mode. Players are going to die and retry many times before fully mastering the game and achieving what seems impossible.

Discover 80 hand-designed levels with many different types of obstacles, a unique minimalist graphic style and sound track.

## Story

We are a young independent studio managed by Yannick and Xavier, two brothers passionate about game development.

Vertical Adventure is Yannick's first big project developed over a year. It is inspired by the simplicity and accessibility of the ultra-casual genre but aspires to offer a deeper gaming experience. Yannick created 80 unique levels with a wide variety of challenges inspired by classical platformers but adapted for mobile devices. He also designed a minimalist graphic style and a relaxing soundtrack.

Each level is made to be played many times to get to the next level, beat the reference time, unlock achievements or to speed run through a whole chapter. With every new level, players will discover their ability to master the game and manage what initially seems impossible.
